

HiTV Communications has unveiled its latest full integration navigation system for VE Commodore

Sydney Australia, 1st October 2008

For immediate release

HiTV Communications is known in the market for providing innovative integrated in-car solutions. The latest in its product range is the next generation in-car navigation systems. The new products have been designed to turn your vehicle's video & audio entertainment system into a complete navigation system.

HiTV Communications has designed & developed Australia's first fully integrated, button controlled GPS navigation system for VE Commodore, with world leading mapping and navigation software solutions for both on-road and off-road functions.

VE Commodore full integration navigation system is powered by **HiTV NaviPlus**, the most versatile GPS navigation system in Australia. The new fully integrated navigation system offers complete button control capability to factory installed system. Supported models include **Holden special vehicle HSV, Statesman, Calais, Calais V, SSV, Caprice**. HiTV NaviPlus allows button controlled navigation become a reality for the first time in Australia.

HiTV NaviPlus for VE Commodore integrates voice guidance into factory installed systems. This enhances driving safety, and ensures navigation instructions are loud and clear. Other audio fades as navigation voice guidance is prompted, so as not to interfere with the voice guidance.

A choice of male and female voices is included to suit the driver's preference. Compared to external portable navigation devices (PNDs), HiTV NaviPlus for VE Commodore is a truly integrated solution for those who wish to make full use of their factory premium sound system and navigation display.

HiTV NaviPlus offers both on-road and off-road capabilities with **Navteq maps** and optional **Hema Maps** pre-installed. The maps provide elevation and 3D details, while well tested turn by turn functions provide informative route guidance. In addition, users can expect fast route calculations, brilliant 2D/3D map display and speedometer and a trip computer all while perfectly integrated into the vehicle.

HiTV NaviPlus is powered by **Horizon NavMate** navigation software. Horizon has been a leader in the design of vehicle navigation systems for many years. HiTV's NaviPlus utilises NavMate software that is also used in navigation systems marketed by **Ford, Chrysler, General Motors, Nissan, and Porsche**.

HiTV Communications Pty Ltd (HiTV), established in 2004 in Sydney, is devoted to cutting-edge design & technology in mobile digital TV & automotive electronic equipment. With strong design capability & expertise, HiTV is able to fill the gap in the market place. HiTV offers both aftermarket & OE solutions to Australian customers and is the leading innovator of integrated in-car media & Navigation provider in Australia.
